- Suspect Description
- Identification of Suspect Vehicles and Items and Appropriate Response
- Security Control Centre Operator Course
- Emergency Response in Security
- Writing Security Incident Report

Full- scope Security Audit

The scope of service covers detailed auditing and reporting of all security factors of the protected building or facility as a whole.

Security Inspection

The scope of the inspection shall cover at least one of the directly linked security measures present at the airport or facility.

Field Training and Audit

The service includes a short time visit to a security operation to raise the level of awareness of security agent. The visit also includes short one-to-one informal trainings.

Security System Tests

Security system tests are carried out to examine the effectiveness of implementation of security measures such as access control, perimeter security, protection of assets etc.

Security Risk and Threat assessment

Security Risk and Threat assessment is a detailed and comprehensive study in which all security risks and possible losses are calculated. The study also includes threat identification, vulnerability assessment and risk mitigation recommendations.

Security Investigation

Corporate investigation conducted by an independent, professional team. The investigations include but not limited to theft of company property, vandalism, forgery, fraud, workplace violence, assaults and burglary. The investigation team produces timely, factual and accurate investigation report.

Simulation

Security simulations are designed upon real terrorist attacks and security agents responses are observed. The simulations are carried out with the support of management.

We provide security consultancy and offer cost effective solutions to our customers with our experience in the field for more than 15 years.
